ABOUT

Calce Company was founded by an Australian-Italian family in the coastal city of Wollongong. Passionate about bringing the latest European finishes into Australian homes and commercial buildings.

The origins of Plaster dates back thousands of years, using lime and gypsum. Until two venetian architects rediscovered and improved Venetian Plaster in order to find a solution for the crisis Venice was facing with the weight of the marble sinking buildings into its notorious marshes. They developed the product by introducing resins and other components to enhance its qualities, making it more flexible and durable. The original showroom is still visible in Venice today, at the Olivetti shop near the Piazza San Marco.

With other modernised alternatives such as microcement and decorative finishes, these materials have enhanced the visionary design possibilities for architects, designers, and homeowners.

In our mission, we aspire to influence the industry by introducing new ideas and methods. Staying at the forefront of technological advancements is paramount in our pursuit. Recent breakthroughs in the composition of lime plaster have made these products easier to use, without compromising the quality of the finish, establishing a new standard for both practicality and sophistication.

VENETIAN PLASTER

Venetian Plaster is a reflective, highly polished product that is a long lasting and classically unique finish for walls. The products require a layered application method that creates a stunning depth of texture. All products can be tinted to any colour, and an option to build up layers with multiple colours.

MURANO

A fusion of metallic subtle shimmer reflections intertwined into Venetian Plaster. This iridescent lime-based Venetian Plaster is available in silver, gold and bronze.

INT

GRASSELLO LUCIDO

With a sleek mirror finish, Grassetto Lucido's design is elegant and versatile. Its ultra-fine, micro-filtered lime putty.

INT

SALE E PEPE

An indulgent marble feel and smooth Venetian Stucco finish, with a dotted effect using the Sale e Pepe toner.

INT

ELITE VENEZIA

A uniquely transpiring acrylic stucco, with a contemporary feel that is reminiscent of a Marble-like effect and a sophisticated mirror finish.

MICROCEMENT

Microcement is a specialised decorative coating that is formulated from cement, minerals and water-based resins, creating a durable, water-resistant finish that is designed for bathrooms. It is suited for commercial and residential spaces, where it can be applied to various materials such as tiles, plaster, concrete, laminate and many others. All products can be tinted to many colours.

MARMORINO FLOOR

A microcement finish that is cool and enticing, its modern look combines the depth of a soft marble texture effect in a microcement product.

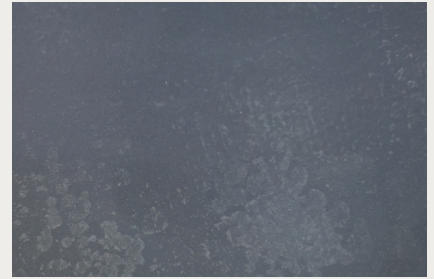

INT | SH-EXT | WET

MICROCEMENT

A coarser version of Marmorino Floor with a soft stone effect. Microcement brings an alluring texture and smooth soft blooming finish.

INT | SH-EXT | WET

MICROSYNTH MARBLE

With its durable, wear-resistant finish, Microsynth Marble's beauty makes it a solid foundation for a strikingly ageless space.

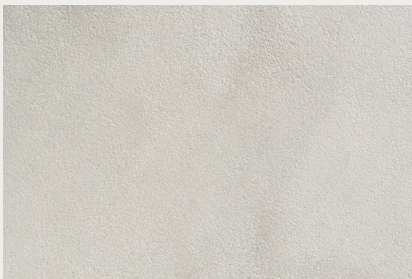

INT | EXT | WET

TROWEL-X

Highly versatile and durable, Trowel-X is a unique Microcement finish that combines the modern minimalist style of a polished concrete effect, that will form a controlled and consistent aesthetic in your space.

INT | EXT | WET

MICRO-QUARTZ

Its beauty is made from a two-component, hybrid cement that is effortlessly flexible and waterproof. This timeless product is available in a Coarse, Medium, and Smooth finish.

FREQUENTLY ASKED QUESTIONS

DO YOU OFFER COLOUR-MATCHING?

We have a current colour range that expands to over 1,950 colours, but we also colour-match many high-end paint manufacturers' colours, tile, stone or marble with our advanced colour lab capabilities.

WHAT ARE THE HEALTH BENEFITS OF DECORATIVE FINISHES?

Our lime-based decorative products have natural breathability, making it an inhospitable surface for bacteria, dust, mould and mildew without the need for chemical additives. In addition, they are extremely low in or completely absent of VOCs (volatile organic compounds).

Our Intonachino is composed of a Lime Putty (Grassello), ground marble and natural additives (no more than 5%), making it the purest product from our range.

DISCLAIMER

Please note that the colours we provide are intended to be as close as possible to the original paint manufacturers' colours. However, due to variations in movement, texture, and aggregates in our products, as well as differences in lighting and display screens, slight colour variations may occur.

This disclaimer is to clarify that we are not affiliated with or endorsed by any paint manufacturers. The colours shown in the catalogue are for reference purposes only, and we recommend viewing and approving physical samples for the most accurate colour representation. We cannot guarantee an exact match to the paint manufacturers' colours and are not responsible for any discrepancies.

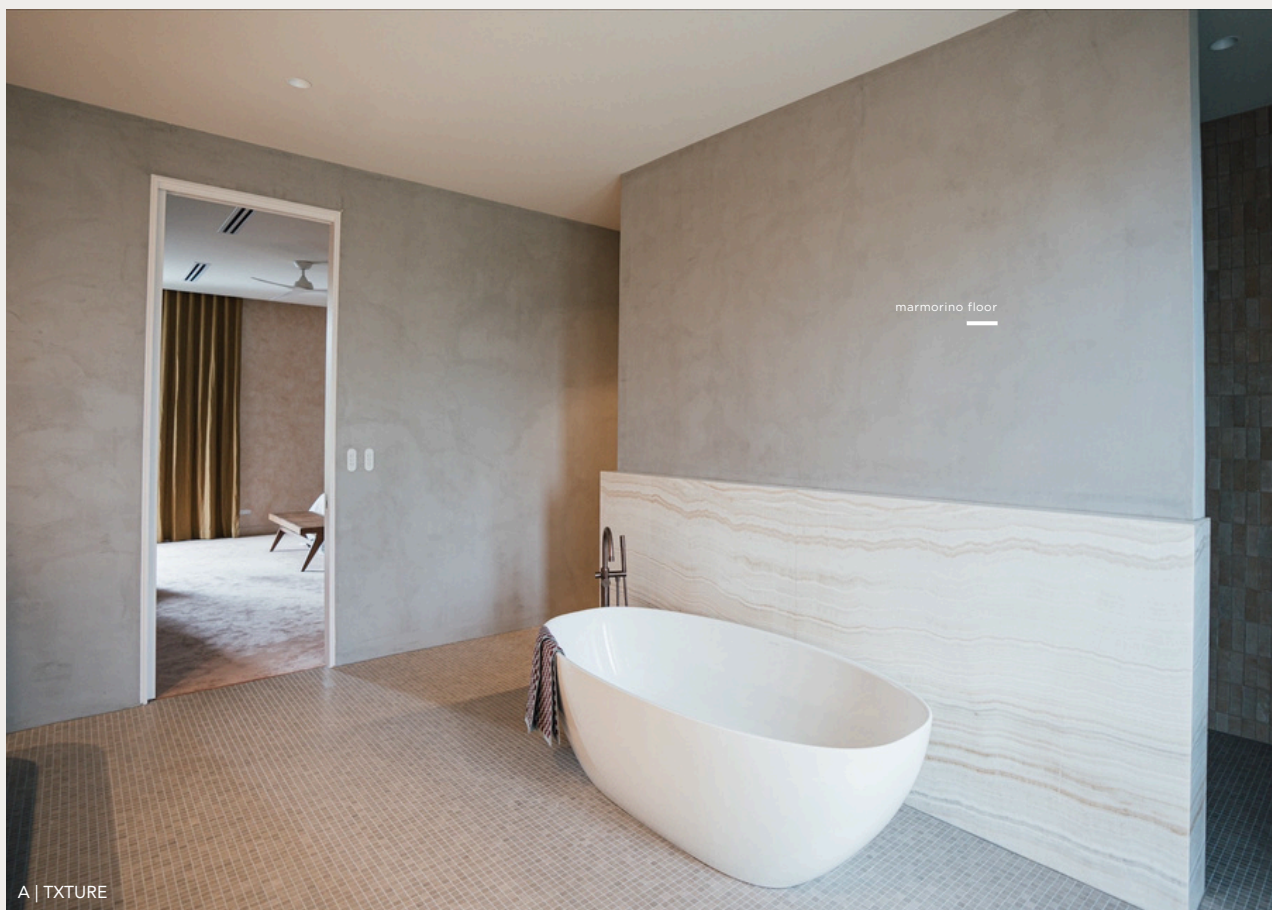

CAN YOU PUT DECORATIVE FINISHES IN BATHROOMS?

We offer five products specifically designed for bathroom use, providing a wide selection to suit various styles and projects.

Our cementitious Microcements range includes Marmorino Floor and Microcement. Marmorino Floor has a smooth finish with a soft, blooming appearance, while Microcement offers a coarser texture.

For a waterproof synthetic option, we have Microsynth Marble, which features less movement in its finish compared to Marmorino Floor and Microcement.

For commercial environments or projects requiring a heavy-duty solution, we recommend our Forcrete range, which includes Micro-Quartz and Trowel-X. Note that Trowel-X is suitable for floors only.

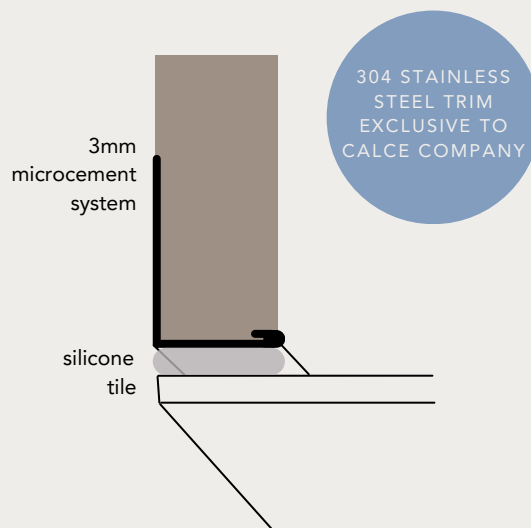

CAN YOU PUT MICROCEMENT ON THE WALLS AND TILES ON THE FLOOR?

When applying microcement to walls, we recommend installing a 3mm stainless steel 304 grade trim at the bottom of the bathroom wall, 2.5-3mm above the finished tile.

This trim serves as a mechanical break, ensuring that when silicone needs to be replaced, there is no need to cut into the microcement system. Its primary function is to prevent water ingress by stopping water from seeping into the grout from the tiles and traveling behind the microcement, which could cause discoloration or delamination.

This method is taught in all our Microcement's All That courses and is highly recommended for use in bathroom wet areas when using tiles or similar on flooring.
